

## Bunz is where people trade.

Bunz was founded in the summer of 2013 by Emily Bitze as a secret Facebook group for trading things with her friends in Toronto. At first trades were made using old records and pasta sauce, and as invitations spread a community emerged, determined to make living in Canada's largest city a little easier.

### Your challenge, should you choose to accept:

Design a system or mechanism that utilizes blockchain to run a private sponsored survey where respondents get paid in cryptocurrency upon completing the survey. Results can only be seen by the survey sponsor. Take into account a dispute resolution case where the respondent can prove that they did answer the survey.

#### \*Example\*

- Nike wants to sponsor a survey on Bunz and offer respondents a reward for completing the survey in BTZ\*.
- Only Nike can see the responses (no one else, not even Bunz).
- Respondents get paid in BTZ immediately upon completing the survey.
- If Nike does not pay them (bad actor), the respondent should have a mechanism for proving they did in fact answer the survey, and for getting their BTZ via some dispute resolution process.
- Dispute resolution could require them to reveal their data.

### PRIZE:

50,000 BTZ

---

Everyday people meet on **Bunz** to trade things like clothing, furniture, houseplants and art. Earn BTZ while you trade and spend them at over 100 of our favourite local businesses in Toronto on coffee, beer, groceries and more.
